

I would like to support the Draft Dudley Local Plan in regards to Corbett Meadow.

Corbett Meadow is a great asset to Corbett Hospital for the mental wellbeing for both patients and staff. The meadow is a green lung in the middle of a very busy area. Clean air is something that we should all be entitled to. The meadow is an essential part of reducing the pollution in the area. This clean air space will help with the health of the local community. In addition it has many mental health benefits for people and can be a saviour for people who feel isolated.

Wildlife is an essential part of our eco system. Many varieties of mammals, birds, insects and plants live within the meadow boundaries so it is vital that this will be conserved.

John Corbett gifted the land to the people of Stourbridge knowing the full benefits that it will have. These benefits have not changed so we should keep it. This will not only benefit the current local community but it will have a long term impact and benefit for future generations.
